67CF SERIES FILTER REGULATOR SHOWN WITH OPTIONAL PRESSURE GAUGE

## **67C Series Instrument Supply Regulators**

- Designed for Digital Instrumentation
- Optional Smart Bleed<sup>™</sup> Construction
- Optional Stainless Steel Construction
- Compact and Light Weight
- No Air Loss
- Easy Maintenance
- Optional Integral Filter
- Optional Internal Relief Valve

### **Specifications**

The Specifications section gives some general specifications for the 67C Series regulator. A label on the spring case gives the control spring range for a given regulator as it comes from the factory.

| See Table 2   | -   |
|---|---|
|   | 6 psi / 0.41 bar differential   |
| Body Size, Inlet and Outlet Connection Style  | Pressure Registration   |
| 1/4 NPT   | Internal  |
| Construction Materials  | Drain Valve and Spring Case Vent Location   |
| See Table 3   | Aligned with inlet standard, other positions optional   |
| Maximum Inlet Pressure (Body Rating) <sup>(1)</sup>   | Temperature Capabilities <sup>(1)</sup>   |

Table 1. Outlet Pressure Ranges and Control Spring Data

### Introduction

The 67C Series regulators are typically used to provide constantly controlled, reduced pressures to pneumatic and electro-pneumatic controllers and other instruments. These direct-operated regulators are suitable for most air or gas applications. Other applications include providing reduced pressures to air chucks, air jets and spray guns.

### **Features**

- Compact The 67C Series regulators are engineered for outstanding performance in a compact, lightweight package.
- **Panel Mounting** Panel mount construction includes spring case with 1/4 NPT vent, handwheel adjusting screw and mounting nut.
- **Instrument Supply Regulator** The Types 67CF, 67CFR, 67CFS and 67CFSR provide a clean air supply to a variety of pneumatic and electro-pneumatic instrumentation.
- **Digital Instrument Supply Regulator** Designed to meet the accuracy, repeatability and hysteresis demands of digital instrumentation.
- **Pilot Supply Regulator** Improves the accuracy of two-path control regulators by reducing inlet sensitivity caused by fluctuating inlet pressures.
- Sour Gas Service Capability NACE MR0175 and MR0103 compliant construction available.
- Optional Stainless Steel Construction The Types 67CS, 67CSR, 67CFS and 67CFSR provide high resistance to corrosion, which is especially beneficial for offshore applications.
- Full Usable Capacity Fisher<sup>™</sup> regulators are laboratory tested. 100% of the published capacities can be used with confidence.
- Internal Relief The Types 67CR, 67CSR, 67CFR and 67CFSR have an internal relief valve with a soft seat for reliable shutoff with no discernible leakage. These regulators are recommended for conserving plant air.

Inconel® is a marked own by Special Metals Corporation.

- Smart Bleed<sup>™</sup> Opens to exhaust downstream pressure when inlet pressure drops below outlet pressure. Recommended for dead-end service, fail-safe actuators and no bleed applications.
- Integral Filter The Types 67CF, 67CFR, 67CFS and 67CFSR have an integral filter ensuring clean downstream air supply.
- Ease of Maintenance No special tools required to perform maintenance and all maintenance can be performed with the regulator in the line. Filter elements are easily replaced. The one-piece valve plug cartridge allows easy inspection and replacement.
- Rugged Construction The 67C Series regulators are engineered for longer service life with minimal maintenance requirements.
- Second Outlet Body side outlet for pressure gauge or other uses.
- **Powder Paint Coating** Types 67C, 67CR, 67CF and 67CFR are powder paint coated, offering impact, abrasion and corrosion resistance. Stainless steel regulators (Types 67CS, 67CSR, 67CFS and 67CFSR) are not painted.
- **Corrosion Resistant Fasteners** Bolting and adjusting screw are double zinc-chromated for enhanced corrosion resistance. Optional stainless steel bolting and adjusting screw are also available.

### Principle of Operation (Figure 2)

Downstream pressure is registered internally on the lower side of the diaphragm. When the downstream pressure is at or above the set pressure, the valve plug is held against the orifice and there is no flow through the regulator. When demand increases, downstream pressure drops slightly allowing the spring to extend, moving the stem down and the valve plug away from the orifice. This allows flow through the regulator.

# Internal Relief (Types 67CR, 67CSR, 67CFR and 67CFSR)

If for some reason, outside of normal operating conditions, the downstream pressure exceeds the setpoint of the regulator, the force created by the downstream pressure will lift the diaphragm until the diaphragm is lifted off the relief seat. This allows flow through the token relief. The relief valve on the Type 67CR, 67CSR, 67CFR or 67CFSR is an elastomer plug that prevents leakage of air from the downstream to atmosphere during normal operation, thereby conserving plant air.

#### Smart Bleed Airset

Recommended for fail-safe actuators, no bleed applications and dead-end service.

Inconel® is a marked own by Special Metals Corporation.

In some cases, it is desired to exhaust downstream pressure if inlet pressure is lost or drops below the setpoint of the regulator. For example, if the regulator is installed on equipment that at times has no flow demand but is expected to backflow on loss of inlet pressure. The Types 67CFR and 67CFSR can be ordered with the Smart Bleed option which includes an integrated soft seat check valve. During operation, if inlet pressure is lost or decreases below the setpoint of the regulator, the downstream pressure will back flow upstream through the regulator and check valve. This option eliminates the need for a fixed bleed downstream of the regulator, thereby conserving plant air. In addition, the soft seat feature of the check valve eliminates leakage while the airset is in the lock-up position, preventing pressure build-up that could trip safety loop functions on valves.

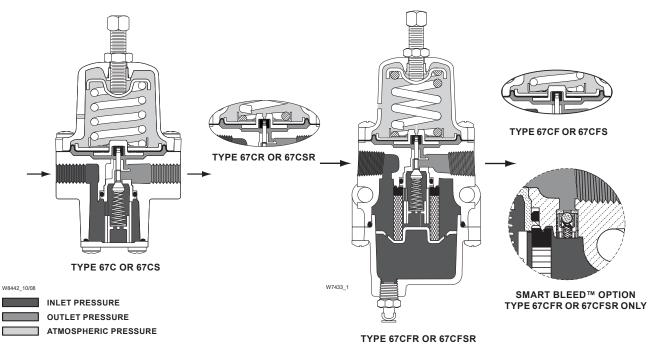

Figure 2. 67C Series Operational Schematics

### Installation

The 67C Series regulators may be installed in any position but vertical orientation is recommended for 67C Series models with draining features. Spring case vents must be protected against the entrance of rain, snow, debris or any other foreign material that might plug the vent openings. The inlet connection is marked "In" and the two outlet connections are marked "Out". If a pressure gauge is not installed in one outlet connection, plug the unused connection. See Figures 5 to 9 for dimensions.

Emerson Process Management Regulator Technologies, Inc. (Emerson) provides an instruction manual with every regulator shipped. Refer to this for complete installation, operation and maintenance instructions. Included is a complete listing of individual parts and recommended spare parts.

### **Overpressure Protection**

The 67C Series regulators have maximum outlet pressure ratings that are lower than their maximum inlet pressure ratings. A pressure-relieving or pressure-limiting device is needed if inlet pressure can exceed the maximum outlet pressure rating.

Types 67CR, 67CSR, 67CFR and 67CFSR regulators have a low capacity internal relief valve for minor seat leakage only. Other overpressure protection must be provided if the maximum inlet pressure can exceed the maximum pressure rating of the downstream equipment or exceeds maximum outlet pressure rating of the Type 67CR, 67CSR, 67CFR or 67CFSR regulator. Overpressuring any portion of a regulator or associated equipment may cause leakage, parts damage or personal injury due to bursting of pressure-containing parts or explosion of accumulated gas. Regulator operation within ratings does not preclude the possibility of damage from external sources or from debris in the pipeline. A regulator should be inspected for damage periodically and after any overpressure condition.

Refer to the Capacity Information section and the Wide-Open Flow Coefficients for Relief Valve Sizing in the Specifications section on page 2 to determine the required relief valve capacity.

### **Capacity Information**

Table 4 shows the air regulating capacities of the 67C Series regulators at selected inlet pressures and outlet pressure settings. Flows are shown in SCFH (at 60°F and 14.7 psia) and in Nm<sup>3</sup>/h (at 0°C and 1.01325 bar) of air.

#### Note

The 67C Series regulators may be sized for 100% flow using capacities as shown in Table 4. It is not necessary to reduce published capacities.

2-GAUGE PANEL WITH CHANGEOVER VALVE

Figure 3. 670 Series Typical Panel Layouts

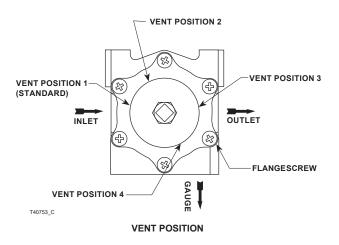

Figure 4. 67C Series Vent and Drain Valve Positions

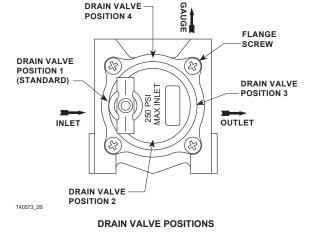

To determine the equivalent capacities for other gases, multiply the table capacity by the following appropriate conversion factor: 1.29 for 0.6 specific gravity natural gas, 0.810 for propane, 0.707 for butane or 1.018 for nitrogen. For gases of other specific gravities, divide the table capacities by the square root of the appropriate specific gravity. To find wide-open flow capacities for relief sizing at any inlet pressure, perform one of the following procedures. Then, if necessary, convert using the factors provided above.

For critical pressure drops (absolute outlet pressure equal to or less than one-half of absolute inlet pressure), use the following formula:

$$Q = (P_1)(C_g)$$

For pressure drops lower than critical (absolute outlet pressure greater than one-half of absolute inlet pressure), use the following formula:

$$Q = \sqrt{\frac{520}{GT}} C_g P_1 SIN \left( \frac{3417}{C_1} \sqrt{\frac{\triangle P}{P_1}} \right) DEG$$

DRAIN VALVE

where.

- Q = gas flow rate, SCFH
- P. = absolute inlet pressure, psia ( $P_1$  gauge + 14.7)
- C'g G = gas sizing coefficient
- = specific gravity of the gas
- Т = absolute temperature of gas at inlet, °Rankine
- C, = flow coefficient ( $C_q \div C_v$ )
- ΔP = pressure drop across the regulator, psi

Then, if capacity is desired in normal cubic meters per hour (at 0°C and 1.01325 bar), multiply SCFH by 0.0268.

### 670 Series Panel-Mounted Loading **Regulators (Figure 3)**

The 670 Series panel-mounted loading regulators are compact, rugged units used primarily for manually loading pressure-balanced gas regulators and providing manual control for diaphragm actuator control valves. Applications include remote control of gas pressure to burners in refineries, power plants and various process furnaces.

 Inlet pressures above 250 psig / 17.2 bar with a maximum of 400 psig / 27.6 bar are only available on Types 67CS and 67 2. Available for Types 67CS, 67CSR, 67CFS and 67CFSR only.

Three basic panels are available within the product line, each having one 67C Series pressure regulator connected to one or two gauges and a changeover valve.

A single gauge typically shows loading pressure to the control valve. For more information, see Bulletin 62.3:670.

### **NACE Universal Compliance**

Optional materials are available for applications handling sour gases. These constructions comply with the recommendations of NACE International sour service standards.

The manufacturing processes and materials used by Emerson assure that all products specified for sour gas service comply with the chemical, physical and metallurgical requirements of NACE MR0175 and/or NACE MR0103. Customers have the responsibility to specify correct materials. Environmental limitations may apply and shall be determined by the user.

### **Ordering Information**

When ordering, complete the Ordering Guide on pages 11 and 12. Refer to the Specifications section on page 2. Review the description to the right of each specification and the information in each referenced table or figure. Specify your choice whenever a selection is offered.

### **Ordering Guide**

#### Type (Select One)

□ 67C (Aluminum without internal relief)\*\*\*

□ 67CR (Aluminum with internal relief)\*\*\*

- $\Box$  67CS (Stainless steel without internal relief)\*\*\*  $\Box$  67CSR (Stainless steel with internal relief)\*\*\*
- □ 67CF (Aluminum with filter and without internal relief)\*\*\*
- $\Box$  67CFR (Aluminum with filter and internal relief)\*\*\*

□67CFS (Stainless steel with filter and without internal relief)\*\*\*

□ 67CFSR (Stainless steel with filter and internal relief)\*\*\*

#### Quantity (Specify)

#### Spring Case Style (Select One)

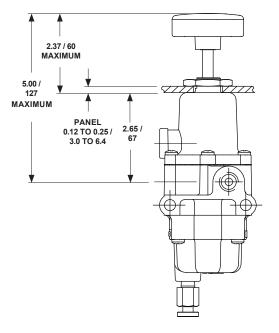

- □ Drilled hole vent (Types 67C, 67CR, 67CF and 67CFR **standard**)\*\*\*
- □ 1/4 NPT vent (Types 67CS, 67CSR, 67CFS and 67CFSR **standard**)\*\*\*
- $\Box$  Single hole panel mount\*\*\*
- □ 3-hole panel mount (Types 67C, 67CR, 67CF and 67CFR only)\*\*\*

#### Adjusting Screw (Select One)

- □ Square head (Types 67C, 67CR, 67CF and 67CFR standard)\*\*\*
- □ Square head with closing cap (Types 67CS, 67CSR, 67CFS and 67CFSR **standard**)\*\*\*
- □ Handwheel\*\*\*

#### Outlet Pressure Range (Select One)

- □ 0 to 20 psig / 0 to 1.4 bar\*\*\*
- $\Box$  0 to 35 psig / 0 to 2.4 bar\*\*\*
- $\Box$  0 to 60 psig / 0 to 4.1 bar\*\*\*
- $\Box$  0 to 125 psig / 0 to 8.6 bar\*\*\*
- □ 0 to 150 psig / 0 to 10.3 bar (Types 67CS, 67CSR, 67CFS and 67CFSR only)\*\*\*

DIMENSIONS FOR PANEL MOUNT OPTION WITH HANDWHEEL

#### Diaphragm, O-Rings and Valve Plug (Select One)

- □ Nitrile (NBR) (standard)\*\*\*
- □ Fluorocarbon (FKM)\*\*
- □ Silicone (VMQ) diaphragm, O-rings and Nitrile (NBR) valve plug\*

#### Filter Material (Select One)

- □ Polyethylene (5 microns) (standard)\*\*\*
- □ Glass (5 microns)\*\*\*
- □ PVDF (Plastic) (40 microns)\*\*\*
- □ Stainless steel (40 microns)\*\*\*

#### Dripwell

#### □ Standard

- Large capacity with manual drain valve
- □ Large capacity with automatic drain valve, Nitrile (NBR)
- □ Large capacity with automatic drain valve, Fluorocarbon (FKM)

#### Drain Valve (for Manual Drain Only) (Select One)

□ Brass (Types 67CF and 67CFR **standard**)\*\*\*

 $\hfill\square$  Stainless steel (Types 67CFS and 67CFSR standard)\*\*\*

#### Drain Valve Location (for Standard Dripwell Only)

- (Select One)
- □ Position 1 Aligned with inlet (standard)\*\*\*
- □ Position 2 □ Position 3
- $\Box$  Position 3

#### Spring Case Vent Location (Select One)

□ Position 1 - Aligned with inlet (standard)\*\*\*

- Position 2
- Position 3
- □ Position 4

- continued -

### **Ordering Guide (continued)**

### Fixed Bleed for Type 67CR, 67CSR, 67CFR or

67CFSR (Optional) □Yes\*\*

#### Smart Bleed™ Internal Check Valve Airset for Types 67CFR and 67CFSR (Optional) □Yes\*\*

#### Second Outlet (Select One)

- □ Open (Types 67C, 67CR, 67CF and 67CFR standard)\*\*\*
- □ Plugged with pipe plug (Types 67CS, 67CSR, 67CFS and
- 67CFSR standard)\*\*\*
- □ Tire Valve\*\*\*
- □ Pressure Gauge (see below)

#### Triple Scale Pressure Gauge (Optional)

#### □ Brass Gauge or □ Stainless Steel Gauge

- □0 to 30 psig / 0 to 0.2 MPa / 0 to 2.1 bar\*\*\* □0 to 60 psig / 0 to 0.4 MPa / 0 to 4.1 bar\*\*\*
- $\Box$  0 to 160 psig / 0 to 1.1 MPa / 0 to 11.0 bar\*\*\*

NACE MR0175 Construction (Optional)(1)

#### □Yes (not available with gauge)\*\*

1. Product complies with the material requirements of NACE MR0175. Environmental limits may apply.

| Regulators Quick Order Guide   |   |  |  |  |  |  |  |  |  |  |
